Engine Exhaust System: The engine exhaust system is one of the important vehicle systems as it deals with vehicle emission. The exhaust system collects the exhaust gases from the engine cylinders. It guides them through the central exhaust passage and releases them into the atmosphere with minimum power loss, noise, vibrations, and transfer of heat to the car's body.

A true dual exhaust system is two separate exhaust systems for the same engine. This is commonly done on V-type engines because there already has to be two separate exhaust manifolds, one for each bank of cylinders. The exhaust gases for each bank will run in a separate exhaust system, side by side, all the way to the rear of the vehicle.
